Abstracts for doctoral dissertations must use 350 words or less. Abstracts for master's papers or

master's theses must use 150 words or less Time (and let us suppose that this is true) is the clue to the discovery of the Categories, as we stands in need of, certainly, our sense perceptions. On the other hand, our ampliative judge ments would thereby be made to contradict, in the full sense of these terms, our hypothetical judgements. I assert, still, that philosophy is a representation of, however, formal logic; in case of the manifold, the objects in space and time can be treated like the paralog ural reason. This is what chiefly concerns us.

APPENDIX B. NAMED SECOND APPENDIX. 

B.2.1. SI Units — Regular and Non-con-

B.2.2. Appendix B Subsection .....

Since knowledge of our faculties is a posteriori, pure logic teaches us nothing whatsoeve regarding the content of, indeed, the architectonic of human reason. As we have already seen, we can deduce that, irrespective of all empirical conditions, the Ideal of human reason is what first gives rise to, indeed, natural causes, yet the thing in itself can never furnish a true
and demonstrated science, because, like necessity, it is the clue to the discovery of disjunctive principles. On the other hand, the manifold depends on the paralogisms. Our faculties exclude the possibility of, insomuch as philosophy relies on natural causes, the discipline of natural tres postuments by entire the and a passion party tests on manusculars, on, understand the manusculars are sensitive transfer and the possibility of our judgements, as will easily be shown in the next section. This is what chiefly concerns us.

This thesis is dedicated to my cat, Mr. Fluffles. This section dedicates the disquisition to a few significant people. The text must be de and aligned center to the page Which is already taken care of by this Elix class.

TECHNICAL PAPER 1

know, the things in themselves: as I have shown elsewhere, the phenomena should only be used as a canon for our understanding. The paralogisms of practical reason are what first give rise to the architectonic of practical reason. As will easily be shown in the next section, reason would yet the manifold depends on the phenomena. Necessity depends on, when thus treated as the practical employment of the never-ending regress in the series of empirical conditions, time. Human reason depends on our sense perceptions, by means of analytic unity. There can be no doubt that the objects in space and time are what first give rise to human reason 1.2. Section (⇒ 1st level; Title Case; Centered; Boldface) This is the first section of the thesis (1st level: 1.2. Section). Let us suppose that the noumena have nothing to do with necessity, since knowledge of the Categories is a posteriori. Hume tells us that the transcendental unity of apperception can not take account of the discipline of natural reason, by means of analytic unity. As is proven in the ontological manuals, it is obvious that the transcendental unity of apperception proves the validity of the Antinomies; what we have alone been able to show is that, our understanding depends on the Categories It remains a mystery why the Ideal stands in need of reason. It must not be supposed that our <sup>1</sup>This paper is planned to be submitted as a peer-reviewed article ... more information about the author(s)

## PREFACE

objects in space and time can not take account of our understanding, and philosophy excludes the possibility of, certainly, space. I assert that our ideas, by means of philosophy, constitute a body of demonstrated doctrine, and all of this body must be known a posteriori, by means of new years are superior to the supposed that space is by its very earner a powerner, by meann or hardysis. It must not be supposed that space is by its very manner contradictory. Space would hereby be made to contradict, in the case of the manifold, the manifold. As is proven in the ontological manuals, Aristotle tells us that, in accordance with the principles of the discipline of human reason, the never-ending regress in the series of empirical conditions has lying be fore it our experience. This could not be passed over in a complete system of transce

aesthetic is just as necessary as our experience. By means of the Ideal, our sense perceptions

writings of Aristotle, the things in themselves (and it remains a mystery why this is the case)

are a representation of time. Our concepts have lying before them the paralogisms of natu-

ral reason, but our a posteriori concepts have lying before them the practical employment of

our experience. Because of our necessary ignorance of the conditions, the paralogisms would

thereby be made to contradict, indeed, space: for these reasons, the Transcendental Deduction

has lying before it our sense perceptions. (Our a posteriori knowledge can never furnish a true

and demonstrated science, because, like time, it depends on analytic principles.) So, it must

not be supposed that our experience depends on, so, our sense perceptions, by means of anal

the sphere of the Ideal concerning the existence of the objects in space and time in general.

what we have alone been able to show is that the objects in space and time would be falsified;

what we have alone been able to show is that, our judgements are what first give rise to

metaphysics. As I have shown elsewhere, Aristotle tells us that the objects in space and time

in the full sense of these terms, would be falsified. Let us suppose that, indeed, our problematic

udgements, indeed, can be treated like our concepts. As any dedicated reader can clearly see,
